

## Alfred Informal's original speech for the Climate and Nature: Senate and Clark Candidates Forum

HEMP Party policy is for the legalisation of hemp. That's it. Hemp is an environmentally-friendly, non-polluting crop which produces multitudinous sustainable products which are often better than alternatives.

Hemp fibre is better than cotton-fibre—a softer and stronger fibre, a crop that's easier to grow, using less water and far fewer pesticides. Hemp-protein is better than nearly every other source of protein. Hemp-fuel is better than fossil fuels. Hempcrete is better than concrete.

I personally support any climate action which is actually real action. I support measures to cope with flooding or drought. I support measures such as roofing public spaces to prevent suffering from extreme heat or extreme cold. I support measures to provide roofing to orchards, and to insulate soils. I support the utilisation of human ingenuity to solve real problems which face us, but I, personally, don't support any "climate action" which involves further taxation or increasing electricity bills because man-mad global warming, or as it is foolishly and duplicitously now called, "climate change", is a pseudo-scientific hoax, a wicked scam, a fraudulent scheme, an evil con and a damned fucking lie.

Your silly so-called scientists pushing global warming say that magic carbon dioxide causes more coolth as well as more warmth. Yet I see few people pressing for real climate action in the form of advocating for sensible preparations for extreme weather.

Last year Hobart was almost paralysed by one hard day's rain. What would the State and local governments do if the rain had continued for a week? Have they planned for that contingency? Has the city council formed a plan for what to do should a cold-snap be so severe that no garden or nursery soil can be tilled? Has the council formed a plan for what to do if local food-crops were destroyed and supermarkets ran out of food? Of course not.

The spending of thousands of millions of dollars on hugely impractical wind-farms, for example, is damaging to the economy and to the environment; they will make electricity more expensive whilst doing fuck all to prevent "climate change". Producing the huge turbine's innards certainly adds more pollution to the Chinese environment and poisons more poor miners around the world. But hey, as long as Australian skies are clear who gives a fuck how many people in the poorer countries of the world have their land, water and air poisoned?

You've been told by mendacious cunts that 97% of scientists support the alleged science of global warming, but that is a wicked deception. Not that consensus means anything in science but the true figure is that very few scientists—perhaps less than 1%—, for cupidity or stupidity or both, believe in catastrophic anthropogenic global warming whereas the majority of real scientists don't support that silly conjecture.

There is negligible warming and carbon dioxide had very little to do therewith. Carbon dioxide, essential for life on earth, is great, and the more we have the greener the earth. Furthermore, the world is not warming significantly, though slight warming is good, and sensible people should accept that as good news.

The bad news is that a sustained and deadly cold-snap might occur any day and governments have not prepared therefor but, instead, are engaged in devastating economies and making electricity unaffordable. Coolth is far more damaging than warmth. Mass migrations and destruction of empires occur when warm periods end, not when they start.

Instead of being pleased by the lack of apocalyptic warming, desperate and dotty false prophets and crazy, catastrophic capnomancers, double down on hysterically demented divinations of dire, dreadful doom—backed by the incurious but corruptly compliant media.

If you really must take climate action you should realise that the planet is in a carbon dioxide drought and, since the world's plants would appreciate a doubling of atmospheric carbon dioxide, perhaps your best "climate action" would be to increase your burning of fossil fuels.

Don't listen to the fraudulent fools, those wicked, widdiful wailing bastards who pretend that the world is warming dangerously. Stop being duped by those dishonest, dodgy doom-sayers. Stop voting for mendacious, mean-minded, mealy-mouthed, maleficent, mulcting, maniacally misanthropic major parties.
